

FIELD MANAGEMENT

Vikima Seed has a close partnership with our growers, and this is what secures the optimal growing and the greatest success. Regular field inspections and professional supervising are key points for a successful seed production.

Vikima Seed support our customers with regular crop reports during the season, with growing conditions and expected yield potential. After harvest, we also report with processing date, volume and quality.

All crop reports are collected in our Business Management System and all information is available for our customers.?

Guidelines are supplied to our growers together with the contract. Field instruction for each individual variety is also supplied to our growers and the instruction is a part of the growing contract.

Field instruction for each individual variety, is based on information from breeders, combined with information gained from our own experience.
