

FACILITIES

To provide the world's highest quality of vegetable seed, Vikima Seed has over the years invested in a wide range of cleaning facilities that can help us to meet our customers demand, when we talk about purity of 99.9%, germination ect.

Since Vikima Seed is an international company and has operations in France and USA, we transport all the seed from France to Denmark, to clean it. While the United States have their own cleaning and drying facilities.

Our international strategy means that we have packing facilities that can handle cans, bags, and bulk, this has given us the possibility to make the whole world market, a potential customer.
