

## VIKIMA DENMARK

Located between 55° and 57° N latitude, Denmark and southern Sweden's long summer day length is unique for seed production.

The combination of perfect climatic conditions combined with a rich well cultivated soil and not at least centuries of experience have made Denmark world leading in seed production of a number of important vegetable species.

The coastal climate keeps a stable temperature during the growing season. The many islands create excellent isolation conditions.

All crops are sown or transplanted on row distance allowing inter-row cultivation.

Internationally known as the production area with the lowest crop failures at all. With more than 75% of the world's Hybrid Spinach production, Denmark has proven itself as the ultimate spinach production area in the world.
