

PACKAGING

Vikima Seed can supply you a wide range of packaging solutions for our OP selection.

The packaging that we use is specially selected to protect the seeds during transport and storing in your warehouse.

We have many sizes of bulk packaging including the most common 20 kg Polypropylene bags and the time and cost saving Big Bags that can carry up to 1000 kg.

If you are looking for added value in your packaging solution, our tin cans, alufoil- or plastic bags are the right way to go. We cover the range from 10 grams alu bags and up to 20 kg Polypropylene bags.

Our Added value packaging carry the Vikima Seed brand which is a selling point in it self and a guarantee all over the world for high quality.

The same packaging is of course available in a neutral design without the Vikima name.
